

Manfrotto - Stativ + Fluid Head

Designed to support a range of small, professional digital cameras as well as photographic cameras with longer lenses and spotting scopes. The head gives best-in-the-market value and performance for medium payloads. The light but positive fluid movement provides exceptionally smooth control on pan and tilt movements. It has added Teflon friction adjustment to increase drag and separate pan and tilt locks. Design practicality also features a quick-release sliding plate with VHS pin, a single pan bar and flat base with 3/8" tripod fixing.
